SUMMARY

Backend Software Engineer with 3+ years owning service architecture, release pipelines, and production reliability for Fortune 500 enterprise systems; led 5-engineer teams, restored critical authentication for 10,000+ users, and drove 83% latency reduction in file-transfer infrastructure. Strong in distributed systems design, API contracts, observability, and cross-team delivery.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services | *Software Engineer II, Gandhinagar, India* Oct 2022 – Dec 2024

- Led 5-engineer team to redesign multithreaded Java upload service for large 3D engineering files, cutting transfer latency from 60s to 10s (83% improvement) for 10,000+ production users
- Directed live OAuth incident response with Microsoft engineers, diagnosing a broken SharePoint authentication path and restoring enterprise access for 10,000+ users within 48 hours
- Designed Spring Security RBAC system with real-time role synchronization across 10 enterprise applications, closing access gaps and reducing support ticket volume by 22%
- Automated Docker cloud infrastructure across AWS and GCP, eliminating manual provisioning overhead by 30% across 10 production applications

Tata Consultancy Services | *Software Engineer, Gandhinagar, India* Mar 2021 – Sep 2022

- Stabilized GitLab CI/CD pipelines with enforced test gates across 7+ applications, enabling a 9-engineer team to ship 40+ zero-downtime production releases
- Revived a degraded Java production service by migrating to Java 11 and layering Redis caching within 2 months, recovering 30% throughput and earning a Wabtec Client Award
- Unified REST API and SQL schema contracts across 3 interconnected Java applications, allowing 9 independent engineering teams to deploy without cross-system data failures

Global Health Impact | *Software Engineering Intern, New York, NY* Jun 2025 – Aug 2025

- Delivered AWS-hosted FastAPI service handling real-time disease burden queries across 150+ countries, collapsing research reporting cycles from hours to under 30 seconds
- Constructed PostgreSQL and MongoDB pipelines that process 10M+ weekly WHO health records, cutting manual data preparation by 90% for research teams

PROJECTS

[JobPulse](#) | Java, Spring Boot, Kafka, PostgreSQL, Redis, React

- Architected Kafka ingestion pipeline absorbing 10,000+ job postings from 3 data sources into PostgreSQL, dropping batch processing time from 3s to under 1s
- Modeled normalized PostgreSQL schemas for jobs, companies, skills, and locations, and exposed Spring Boot search APIs with Redis-backed caching for sub-second filtering

[ReviewBot](#) | Python, FastAPI, LangGraph, Redis, GitHub Actions

- Built LangGraph multi-agent review pipeline backed by Redis memory, maintaining full PR and repository context across sequential code analysis steps
- Integrated FastAPI endpoints into GitHub Actions CI, returning structured style, security, and test feedback on every pull request before merge

TECHNICAL SKILLS

Backend and Architecture: Java, Spring Boot, REST APIs, microservices, Spring Security, Python, FastAPI

Data and Distributed Systems: SQL, PostgreSQL, MySQL, MongoDB, Redis, Kafka, NoSQL, data modeling

Cloud and Operations: AWS, Docker, Kubernetes, Linux, GitLab CI/CD, Datadog, CloudWatch

Security and Delivery: OAuth 2.0, JWT, RBAC, JUnit, automated testing, production debugging, code reviews

EDUCATION

Binghamton University, State University of New York | *Binghamton, NY*

Jan 2025 - May 2026

Master of Science, Computer Science (AI Specialization), GPA: 4.00

Gujarat Technological University | *Ahmedabad, India*

Aug 2016 – Sep 2020

Bachelor of Engineering, Computer Engineering
